

GALA®

High yields and quality raspberry for processing and freezing

RECOMMENDED FOR OPEN FIELDS AND MOUNTAIN REGIONS

GALA® is a easy to grow primocane variety with exceptionally high yield.

The variety is suitable for machine harvesting.

It is recommended **GALA®** to be grown as a early to mid summer cropping cultivar.

The characteristics of **GALA®** comprise the abundance of fast growing powerful canes that compress the rows. The new shoots reach heights of 180-200cm and require light support.

FRUITING PERIOD

Beginning of August

September

October

IN VITRO PLANTING MATERIAL

Recommended fruiting canes per linear meter with row distance of 2.5-3m

During the season

30

Planting distance in the row

70—80 cm

Main characteristics

Crop yield

2 000 – 2 500 kg

Average weight of the fruit

3—4 g

Taste

Aroma and long shelf life

Shape

Oval to conical

Color

Light red
